Dear Ms. Fuerst:

In June 1981 our firm completed a "Notification of Hazardous Waste Site" form as required by Section 103(c) of the Comprehensive Environmental Response, Compensation, and Liability Act. The site location consists of a few hundred square feet of our plant site, where stencil cleaning work had been performed in the past. Some incidental loss of solvent on the ground occurred during this time.

In the near future, we intend to take the following steps regarding cleanup and removal of contaminated material at our facility:

1. ASSESSMENT OF THE WASTES' IMPACT ON THE SUBSURFACE --  
Surface soil samples (from 3-5 locations) will be collected and analyzed for the compounds used as solvents during the active phase of this site. An equal number of subsurface samples will be collected and analyzed for contents so as to determine the vertical extent of contamination.
2. GROUND WATER INVESTIGATION --  
Ground water flow in the area will be determined from such data as compiled by USGS, well inventories, etc. Borings will be made in the most likely direction of flow, with at least one upgradient. Piezometers will be utilized for accurate measurement of water level. Water samples will be collected and analyzed.
3. DATA REVIEW AND REVIEW OF DISPOSAL OPTIONS --  
Results gathered as a result of completion of the tasks noted above will be reviewed. Available removal/disposal options will be considered. (At this time, the most likely solution appears to be excavation and transport to a permitted landfill.)
4. REMOVAL/TRANSPORTATION/DISPOSAL --  
Execution of this phase of the work will then proceed.

Ms. Fuerst

Following completion of these steps, we will report to you again regarding results of actions taken. We will be assisted throughout this process by a consultant with site clean up expertise.

Yours truly,

  
Donald R. Pulliam  
Plant Manager
